

Java

```
class Solution {  
    public int numEquivDominoPairs(int[][] dominoes) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} dominoes  
 * @return {number}  
 */  
var numEquivDominoPairs = function(dominoes) {  
  
};
```

TypeScript

```
function numEquivDominoPairs(dominoes: number[][]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
    int numEquivDominoPairs(vector<vector<int>>& dominoes) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public int NumEquivDominoPairs(int[][] dominoes) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun numEquivDominoPairs(dominoes: Array<IntArray>): Int {  
    }  
}
```
